

## Azure Storage Explorer Setup Guide

---

### ✓ Step 1: Download and Install Azure Storage Explorer

1. Open web browser and go to the official download page:  
<https://azure.microsoft.com/en-us/features/storage-explorer/>
2. Click the **Download now** button.

 We can choose the version for Windows, macOS, or Linux.

3. Once downloaded, run the installer and complete the installation.
- 

### ✓ Step 2: Launch Azure Storage Explorer

1. After installation, open **Azure Storage Explorer** from Start menu or desktop shortcut.

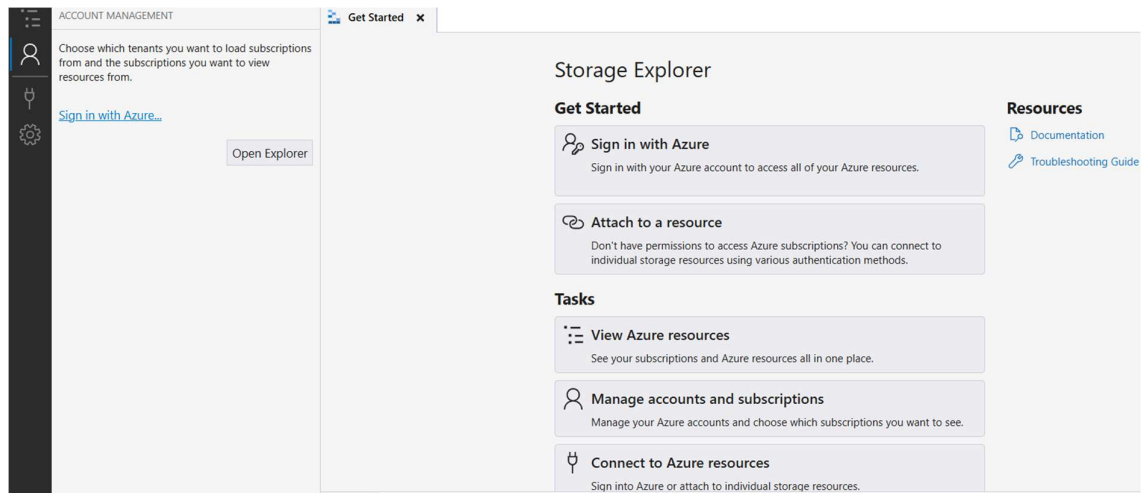

#### Screenshot:

### ✓ Step 3: Sign In with Your Azure Account

1. In the left sidebar or top menu, **click the plug/account icon** (looks like a person or plug).
2. In the Account Management panel, click **Sign in with azure**

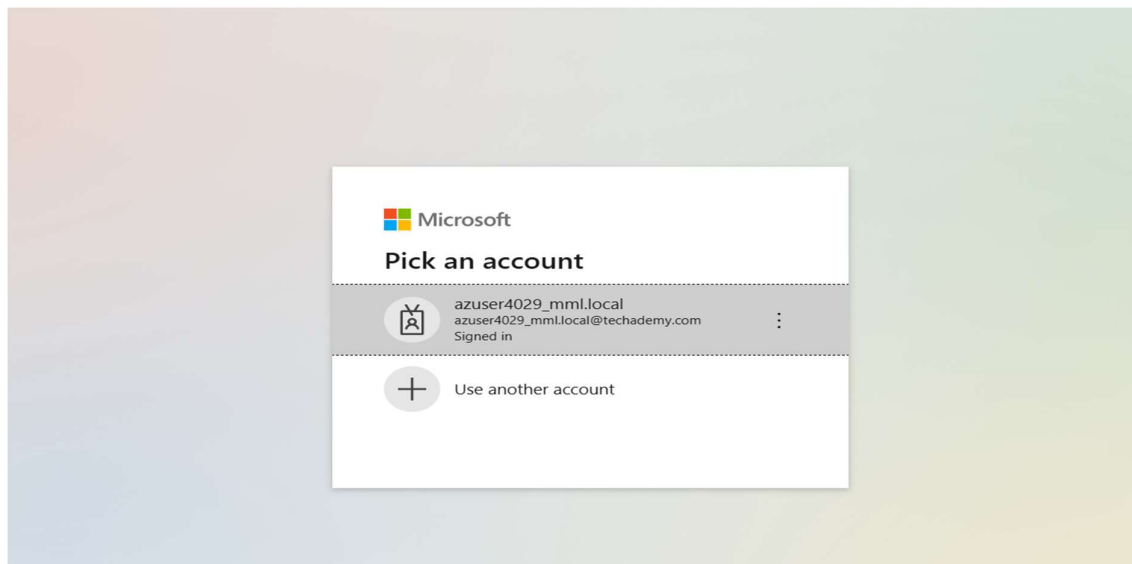

## ▼ Screenshot:

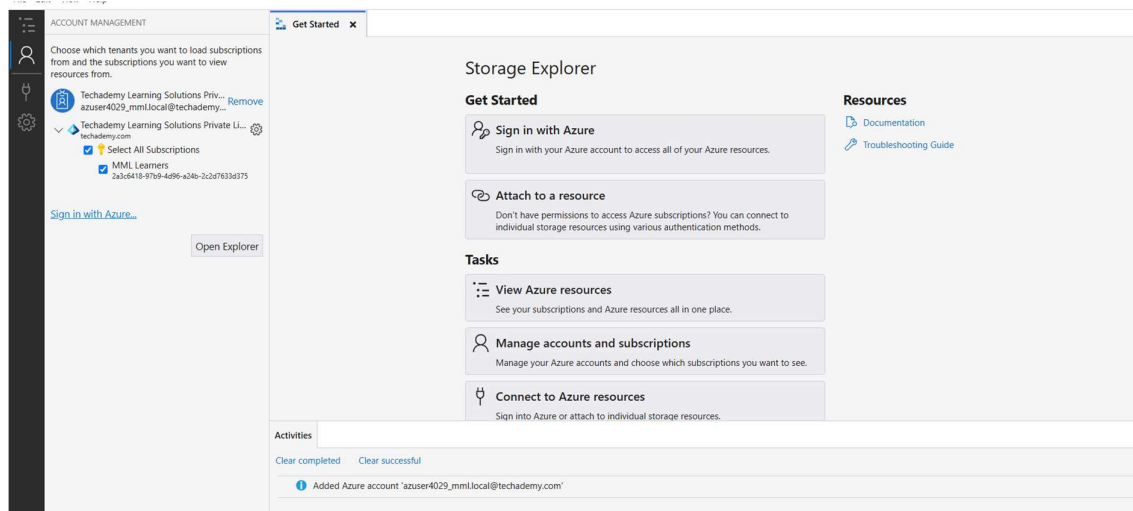

## ✅ Step 4: Connect to Azure

1. After click sign in, it take to azure platform then pick an account and sign in
2. Now our account is signed in with azure platform

## ▼ Screenshots:

## ✓ Step 5: Verify Connection

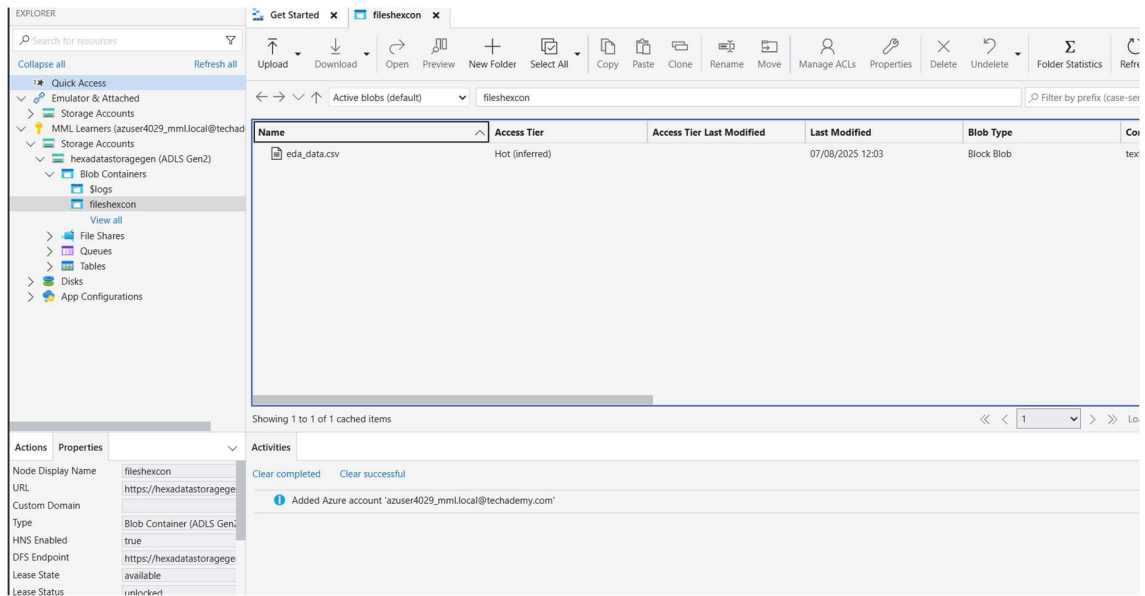

1. Under azure, we'll see:

- **Storage Accounts**
- **Blob Containers**
- **File Shares**
- **Queues**
- **Tables**

2. We can expand each node to view the containers and objects created in the Azure Portal.

3. Double-click any container to open and browse its contents.

## Screenshot:

The screenshot displays the Azure Storage Explorer application. The left sidebar shows the 'EXPLORER' pane with a search bar and a tree view of storage resources. The main pane shows a table of blobs with columns: Name, Access Tier, Access Tier Last Modified, Last Modified, Blob Type, and Container. One blob is visible: 'eda\_data.csv' with an 'Access Tier' of 'Hot (inferred)' and a 'Last Modified' date of '07/08/2025 12:03'. The bottom pane shows the 'Properties' tab for the selected blob, displaying details like 'Node Display Name', 'URL', 'Custom Domain', 'Type', 'HNS Enabled', 'DFS Endpoint', 'Lease State', and 'Lease Status'. The 'Activities' pane on the right shows a message: 'Added Azure account 'azuser4029\_mm1.local@techademy.com''.

## Summary

Successfully:

- Installed Azure Storage Explorer locally.
- Signed in to your Azure account.
- Verified storage resources.
